

TABLE OF CONTENTS

1. LOGIN PORTAL
2. ADMIN PORTAL
3. EMPLOYEE PORTAL
4. CLIENT PORTAL

LOGIN PORTAL

- Show/hide password toggle
 - Where: Login pages for Admin, Employee, Client.
 - Explanation: Add a visible eye icon to toggle password visibility on all login and password-entry forms so users can confirm input before submitting.
- Fix "Forgot Password" email
 - Where: Login pages and Account > Change Password.
 - Explanation: Implement a password-reset flow that sends a secure email link or token with expiry. The link opens a reset page where users set a new password.
- Email verification (OTP) on signup
 - Where: Client signup flow.
 - Explanation: On new client registration send an OTP or verification link to the provided email; mark account unverified until confirmed.
- Post-approval confirmation email
 - Where: Admin Portal (approval action) and Client Portal (recipient).
 - Explanation: After admin approves a newly created client account, automatically send the client a confirmation email with account summary and next steps.
- Optional device autofill of credentials
 - Where: Login forms across all portals.

- Explanation: Allow browsers/devices to store credentials (or provide a secure local option) so returning users can autofill credentials; provide a clear option to remove saved credentials.
 - Change Password email should send link
 - Where: Account > Change Password in all portals.
 - Explanation: Ensure the "Change Password" action triggers the same secure email link/token flow if user chooses email reset or allows in-session password change when authenticated.
-

ADMIN PORTAL

- Clickable KPI cards
 - Where: Admin Dashboard / Overview page.
 - Explanation: Make each KPI card (active clients, employees, jobs today, pending signups, new leads, expiring packages) clickable. Clicking opens the appropriate list view filtered to that KPI (e.g., clicking "Active Clients" opens /clients?status=active).
- Renewal Radar client drill-down
 - Where: Admin Dashboard > Renewal Radar.
 - Explanation: Clicking a client in Renewal Radar opens a client detail view (modal or /clients/:id) showing full client data including package, expiry, assigned employee, and recent activity.

Clients

- Client detail on clicks
 - Where: Admin Portal > Client's list.
 - Explanation: Clicking any client row opens a full client profile showing contact details, package, domains, jobs assigned, expiry, and notes.
- Update package limits (80+ jobs/week)
 - Where: Admin Portal displays and package configuration.
 - Explanation: Ensure admin-facing package values reflect the new limits (e.g., 80+ jobs/week) and that these values come from a single source of truth, so they display consistently.
- Sync front-page packages

- Where: Admin Portal & Public/Front page.
- Explanation: Fix inconsistencies so front page and admin views read the same package definitions from the same configuration or DB table.

Employees

- Employee full data on click
 - Where: Admin Portal > Employees list and Employee detail view.
 - Explanation: Clicking an employee opens full profile with assigned clients, job counts per client, last login, designation, status, and working time.
- Track and show login & working time
 - Where: Admin Portal > Employee activity / Admin Lead dashboard.
 - Explanation: Log login and logout timestamps and/or heartbeat to calculate working time; expose this data on employee profile and admin activity pages.

Leader Board / Metrics

- Date filters and historical selection
 - Where: Admin Portal > Leaderboard.
 - Explanation: Add Today, This Week, This Month filters and a date-range or month selector to view historic performance.
- Employee metric drill-down
 - Where: Leaderboard > Employee detail.
 - Explanation: Show per-employee metrics: number of clients handled, jobs applied per client, monthly/client targets and whether targets were met; display counts and percentages.

Client signup approval flow

- Approve without mandatory fields
 - Where: Admin Portal > Approve Signup modal.
 - Explanation: Allow admin to approve new clients without filling optional fields. Provide separate controls to set package and domains later.
- Editable post-approval fields
 - Where: Admin Portal > Client edit page.

- Explanation: Any data entered during approval (package, domains, notes) must be editable afterward via a client edit form.

Domains input

- Allow long inputs and sensible validation
 - Where: Admin Portal > Client domains, Client Portal > domains field, Employee Portal where domains are entered.
 - Explanation: Allow long sentences in domain fields and avoid arbitrary short/long errors; enforce practical server-side max length (e.g., 2000 chars) and meaningful min constraints only where required.

Interview Prep Hub (Admin)

- Implement scheduling
 - Where: Admin Portal > Interview Prep Hub (optional).
 - Explanation: If retained, enable creating interview-prep sessions specifying client, date/time, join link, assigned employee, and attachments; make sessions visible to the assigned employee and the client.

Admin roles & permissions

- Multiple admins and Admin Lead control
 - Where: Admin Portal > Admin management / Users.
 - Explanation: Support multiple admin accounts. Admin Lead (Admin1) must be able to add/remove admins, activate/deactivate accounts, reset passwords, and view activity of other admins. Managed admins should appear as regular admins in UI (do not display "Junior").
- Admin Lead visibility
 - Where: Admin Lead dashboard / Admin activity pages.
 - Explanation: Admin Lead must be able to view login status and working time of other admins and employees.

Chat (Admin responsibilities)

- Admin Lead audit of chats
 - Where: Admin Portal > Chat / Conversations.
 - Explanation: Admin Lead can read all chats and audit conversations between clients, employees, and other admins; other admins have constrained management rights.

EMPLOYEE PORTAL

- Tabs reorder
 - Where: Employee Portal header.
 - Explanation: Reorder the top three options to Domains & Masters, LinkedIn, Log Jobs (in that sequence).
- Duplicate job URL handling
 - Where: Employee Portal > Log Jobs.
 - Explanation: If the same job URL is logged twice, allow saving but mark the duplicate entry visually (red highlight). Do not block entries that share company name or job title (valid duplicates across locations).

AI assistance & files

- CV and cover letter generator
 - Where: Employee Portal > AI Assistance / CV Builder.
 - Explanation: Provide an AI area that can generate CVs and cover letters. Allow uploading master CV, master cover letter, and related files. Provide a prompt input box and keep integration modular for future AI subscriptions.

Employee profile fields

- Editable designation
 - Where: Admin Portal > Add/Edit Employee and Employee self-profile.
 - Explanation: Add a "Designation" field when creating an employee and allow editing it later.

Employee activity tracking

- Record login and working time
 - Where: Admin Portal > Employee activity / Employee profile.
 - Explanation: Track and display login/logout times and working time calculations. Surface this to Admin Lead and relevant dashboards.

Chat (Employee)

- Employee chat capabilities
 - Where: Employee Portal > Chat.

- Explanation: Employees must be able to chat with admins and receive assigned conversations. Admins can assign a chat; once assigned, only that employee and admins can respond.
-

CLIENT PORTAL

- Start chat on Renew
 - Where: Client Portal > Dashboard (Renew button).
 - Explanation: When the client clicks Renew, automatically open or create a conversation with Admin-1 (Admin Lead) so renewal discussions happen in chat.

Account menu & change password

- Account view and change password
 - Where: Client Portal > Account (menu next to Sign out).
 - Explanation: Clicking Account shows full account details (profile). Include a "Change Password" option inside the account view. When used, the change/reset should send a secure email link if user requests email reset.

Interview Prep Hub (Client)

- Show scheduled prep items
 - Where: Client Portal > Interview Prep Hub (if retained).
 - Explanation: When interview-prep sessions are scheduled, show date/time/link and attached prep files on the client's portal. Ensure clients can see upcoming prep sessions and materials.

Chat (Client)

- Client chat functionality
 - Where: Client Portal > Chat.
 - Explanation: Clients must be able to start chats and attach files. When a client sends a message, admins receive a notification; admins or managed admins can reply or assign the conversation to an employee. When assigned, only the assignee and admins can reply.

Additional changes

- When an employee uploads a PDF or Word file, the 'View' option does not work. Please check every place where files can be uploaded and ensure the 'View' option functions correctly.
